Trireme AI

Trireme AI: A Team of Three AI Agents That Picks Stocks For You

> AI that reads the news like a person and checks the numbers like a calculator

GROUP 2:

Sajal Gautam

The Problem Investors Face

Two things make investing hard: there is far too much information to read, and our own emotions cloud our judgment. Regular tools can't fix either one.

Overload

There are too many earnings calls, filings, and news stories to get through. No human can read it all, so good opportunities slip past unnoticed.

Story Bias

People get attached to an exciting story about a company and stop checking whether the actual numbers back it up. That is how bad bets get made.

No Context

Stock screeners only sort by numbers. They can't read the news or understand why a price is moving, so they miss the full picture.

People vs. Machines

People Alone Aren't Enough

People are great at reading the news and sensing the mood of the market. But they get tired, biased, and emotional, so their judgment on risk is not consistent.

Machines Alone Miss the Story

Computer models are fast and unemotional, but they miss context and can't react to surprising news. The fix is a system that reads news like a person and checks risk like a machine — Trireme AI.

Our Solution

Trireme AI is a digital teammate that does stock research for you. Built on n8n and Groq AI, it has one job: find one strong stock to buy each day, while protecting your money first.

For every pick, it writes a Google Doc trade sheet and emails you a full report, so you always know exactly why it made each call.

- **Built on n8n and Groq AI**
- **One strong stock pick every day**
- **Protects your money first**
- **Trade sheets and email reports made automatically**

The Three AI Agents

Trireme splits the work across three AI agents. Each one has a specific job, and together they produce a careful, balanced stock recommendation.

News Hunter

Agent 1 reads the day's news and finds one stock with genuinely good news behind it, like a strong earnings report or a big contract win.

Numbers Skeptic

Agent 2 ignores the hype and checks the math. It looks at five years of financials and runs a valuation to see if the company is actually solid.

Decision Maker

Agent 3 weighs the good news against the risks and makes the final call: Buy, Hold, Sell, or hand it to a human to decide.

Safety Rules

Trireme follows strict rules to protect your money and keep every decision clear and easy to trace.

Built to Protect Your Money

Protect the Money First

If the numbers don't back up the news, the math wins and the recommendation is cancelled. No single pick can ever be more than 10% of your portfolio.

Ask a Human When Unsure

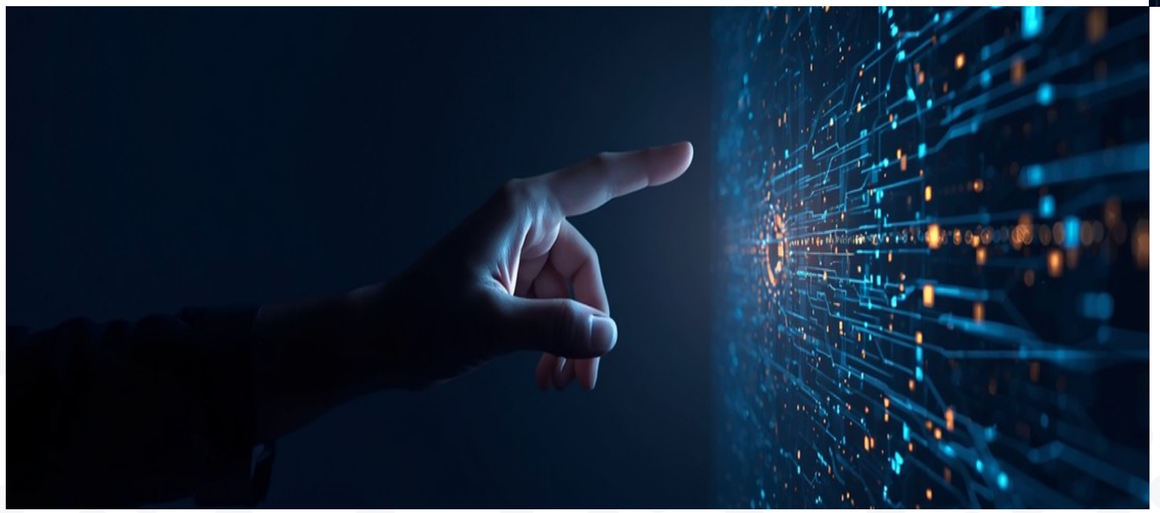

When the agents disagree, the system stops and asks a human to decide. Every output follows the same structure, so nothing breaks and everything is on record.

What's Automated, What's Not

What the AI Does

The AI handles 99% of the work. It reads 50+ articles in under 10 seconds, with no emotion and no fatigue, at any time of day & recommends stock to buy/sell

Where a Human Steps In

But a human always makes the final trade. When the AI is unsure and flags a conflict, a person steps in to decide, which keeps you in control.

Who It's For

Trireme is for serious investors who want fast, professional-quality research without building a big team.

Funds

Fund managers who want extra research help, fewer biased calls, and a steady stream of fresh stock ideas.

Advisors

Advisors managing wealthy clients' money who want top-quality research without hiring a whole research team.

Family Offices

Family offices and hedge funds that want disciplined, clearly-explained picks that protect capital first.

Why It Matters

Trireme changes how investment decisions get made. Here are the three biggest advantages over the old way of doing things.

No Emotions

No fear of missing out and no gut-feel mistakes. The AI runs on logic and data, and always puts protecting your money ahead of chasing hype.

Fast and Tireless

It reads 50+ articles and reports in under 10 seconds. That is research which would take a person hours, done in moments.

Fully Explained

Every pick comes with a clear record of how the decision was made, so you, or a regulator, can always check the reasoning.

Risks and Limits

No automated system is perfect. Here are the honest weak spots you should know before relying on it.

Data-Dependent

The picks are only as good as the news it reads. If a feed is broken, delayed, or full of fake news, the recommendation can be wrong.

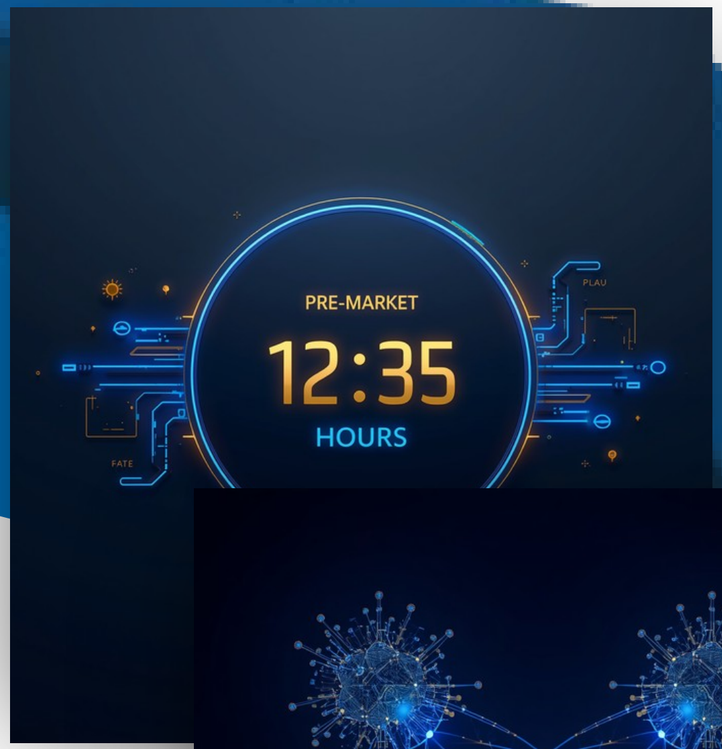

Blind to Shocks

The AI learns from the past, so it can't see a brand-new shock coming, like a sudden crash or a major world event.

Needs Live Data

It relies on outside data services. On busy market days those services can slow down and delay a pick right when timing matters most.

How It Runs

Every morning before the market opens, Trireme runs the same steps automatically: it pulls in the news, removes duplicates, sends it to the agents, and turns it all into one clear recommendation.

Gather and Clean News

Agents Analyze

Write the Report

How We Tested It

Test 1: The Fake-Hype Test

We fed it fake hype stories on purpose to see if it would fall for them. It didn't. When the numbers didn't support the headline, the system correctly killed the trade.

Test 2: Four Live Trading Days

We then ran it live for four real trading days. Every single pick made money, while sticking to its safety rules the whole time.

The Results

Over its four-day live test, Trireme delivered strong returns while sticking to its safety rules the whole way through.

How the Money Grew

ROI

₹10,000 grew to ₹11,509 over four trading days, by reinvesting the gains each day and keeping each position a sensible size.

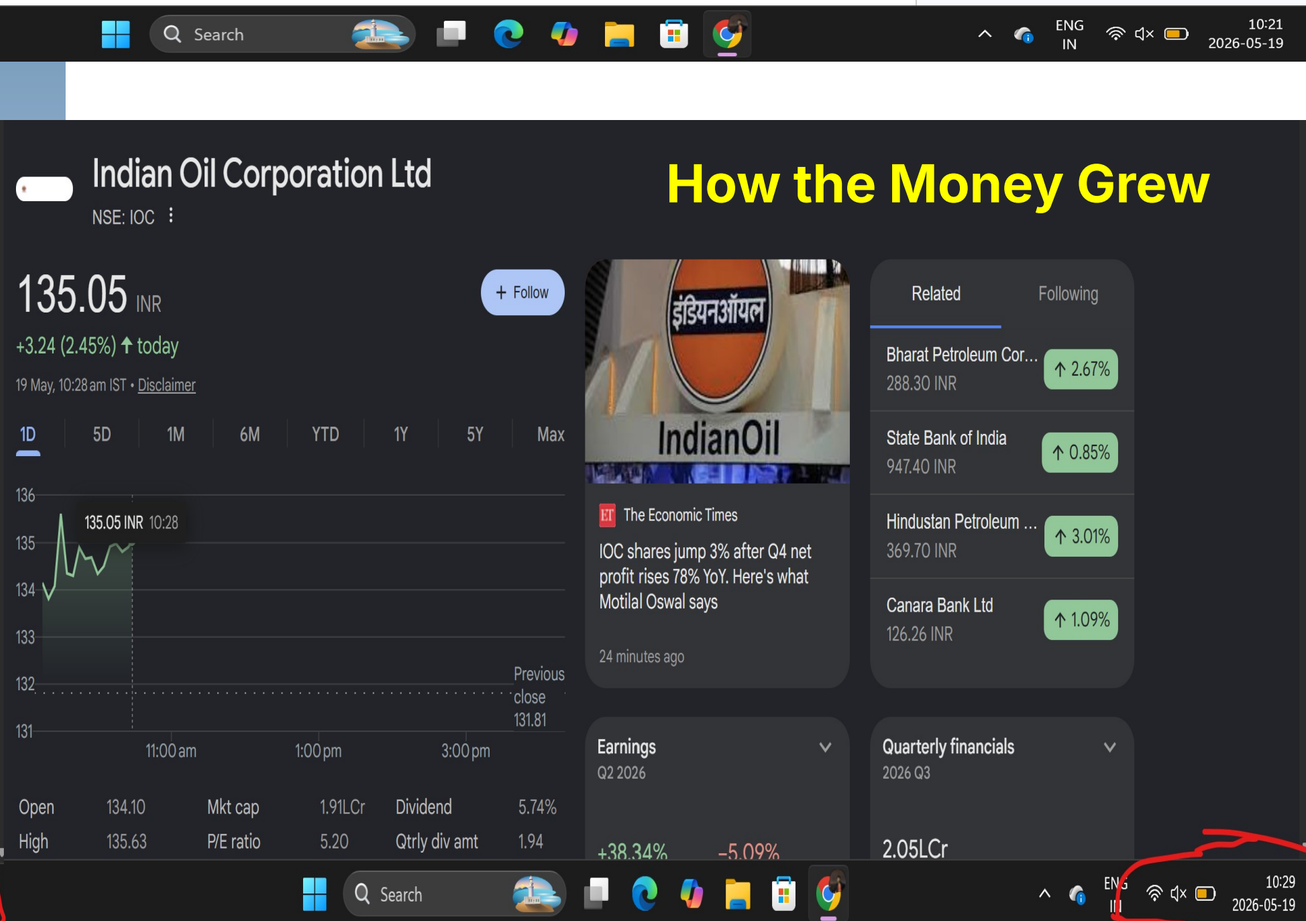

15.1% in 4 Days

All four picks made money, and every trade came with a clear record of why it was made.

TRADE ACTION: BUY STOCK: Hindustan Copper (HINDCOPPER) CONFIDENCE SCORE: 75/100 POSITION SIZE: 10% of portfolio INVESTMENT RATIONALE: Both SPA and RMA reports indicate a positive trend in the company's financial performance, with strong Q4 results and a high expected upside percent. The RMA verdict is APPROVE, and both confidence scores are above 60. BULLISH FACTORS: - Strong Q4 results with 134% YoY increase in profit
- Significant margin improvement
- Growing demand for copper due to infrastructure and renewable energy sectors
- Low debt-equity ratio of 0.23 BEARISH FACTORS / RISKS: - Global copper price volatility
- Regulatory risks in the mining sector
- Competition from private sector players

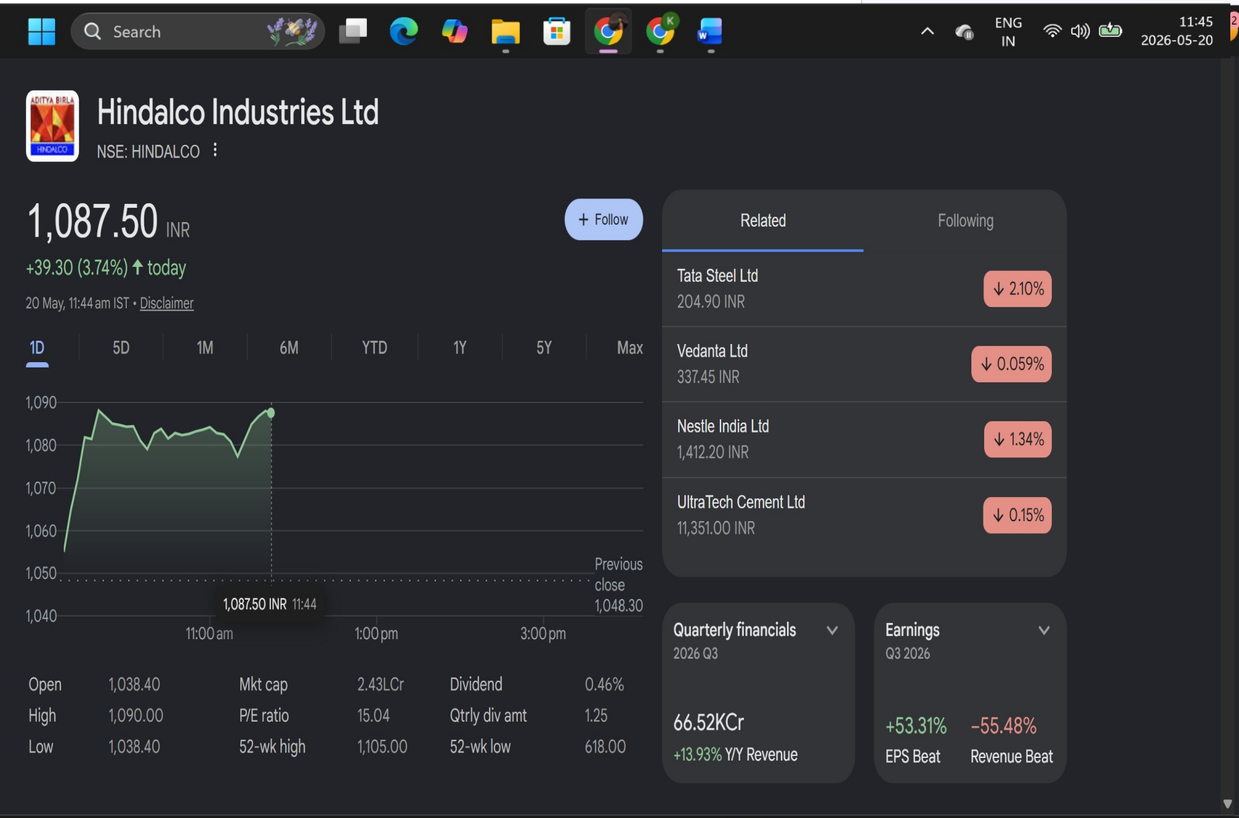

TRADE ACTION: BUY STOCK: Indian Oil Corporation (IOC) CONFIDENCE SCORE: 80/100 POSITION SIZE: 8% of portfolio INVESTMENT RATIONALE: Both SPA and RMA reports indicate a positive outlook for IOC, with strong Q4 results, attractive valuation, and a medium risk rating. The expected upside percent and DCF upside percent are also aligned, suggesting a potential buying opportunity. BULLISH FACTORS: - Strong Q4 results with 78% YoY increase in net profit
- Recent petrol and diesel price hike expected to positively impact oil marketing companies
- Attractive valuation with DCF fair value above current price BEARISH FACTORS / RISKS: - Regulatory risks due to government control over fuel pricing
- Competition from private sector players in the oil marketing space
- Volatility in global crude oil prices impacting refining margins

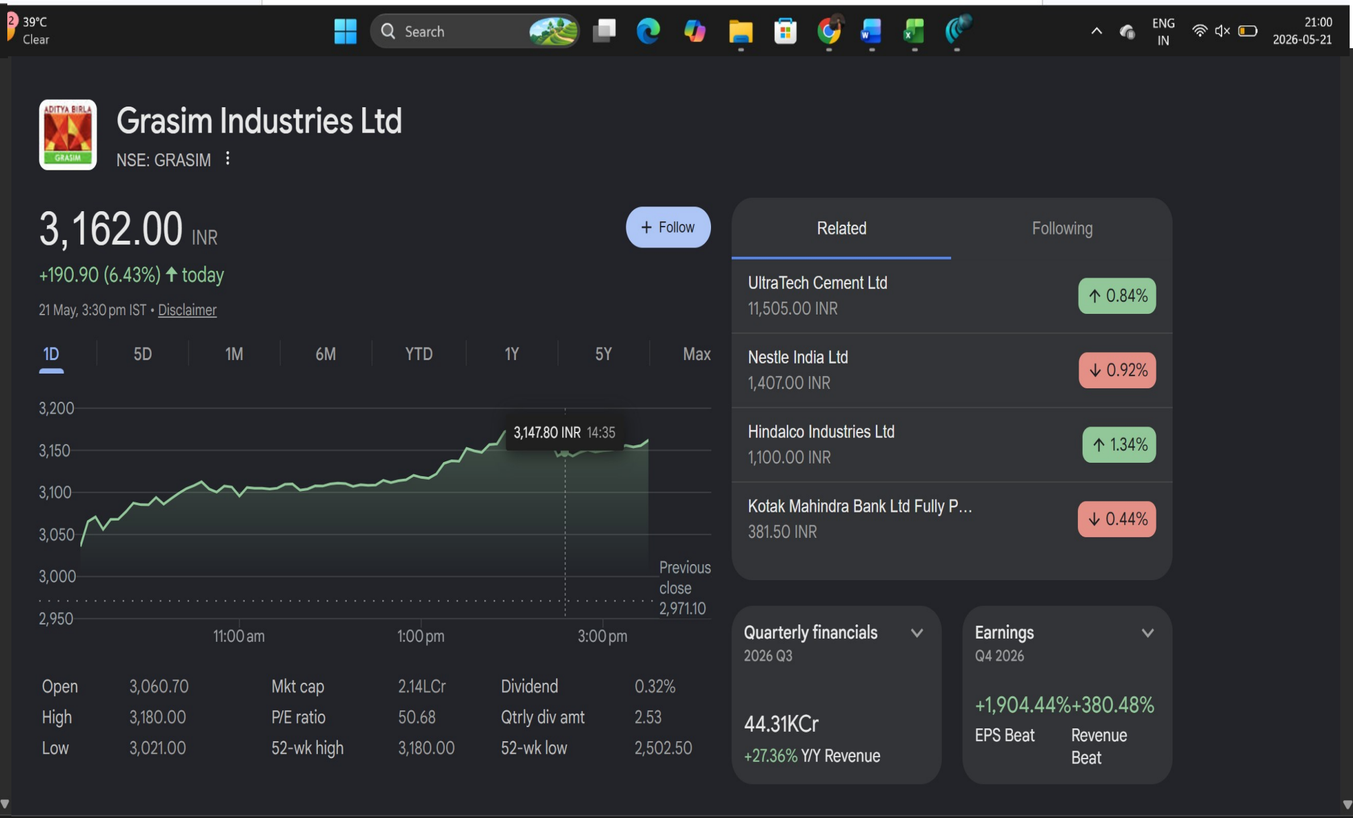

TRADE ACTION: BUY STOCK: Hindalco (HINDALCO) CONFIDENCE SCORE: 75/100 POSITION SIZE: 8% of portfolio INVESTMENT RATIONALE: Both SPA and RMA reports indicate a positive outlook for Hindalco, with expected upside percent of 15 and DCF upside percent of 14.9. The RMA verdict is APPROVE, and the confidence scores from both agents are above 60. BULLISH FACTORS: - Positive commentary from Novelis
- Expected operational improvement
- Upbeat commentary indicating potential turnaround BEARISH FACTORS / RISKS: - Global economic slowdown impacting aluminum demand
- Volatility in raw material prices
- Regulatory changes in the aluminum industry

TRADE ACTION: BUY STOCK: Grasim Industries (GRASIM) CONFIDENCE SCORE: 80/100 POSITION SIZE: 8% of portfolio INVESTMENT RATIONALE: Both SPA and RMA reports indicate a positive outlook for Grasim Industries, with strong earnings momentum and a medium risk rating. The expected upside percent and DCF upside percent are also aligned, suggesting a potential for growth. BULLISH FACTORS: - Strong Q4 profit, up 28% YoY
- 52-week high suggesting strong momentum
- Robust revenue and profit CAGR
- Reasonable debt-equity ratio BEARISH FACTORS / RISKS: - Commodity price volatility affecting raw material costs
- Regulatory changes impacting the chemical and cement industries
- Intense competition in the Indian textile and cement markets

What's Next

Trireme is built to keep improving. Here is what we want to add next.

Connect to a Broker

Link it to a practice trading account so we can test its picks with no real money at stake before going live.

Big-Picture Agent

Add a fourth agent that watches interest rates, inflation, and world events, so picks account for the bigger economic picture.

Give It a Memory

Give the system a memory of its past trades so it can learn from its wins and mistakes and get smarter over time.

"While we aren't advising anyone to entrust their capital to this proof-of-concept today, Trireme AI offers a powerful glimpse into the future of institutional finance. The next era won't be won simply by the fastest algorithms, but by the firms that build the smartest digital teammates to augment human intelligence."
